

CLARION

CALL!

Volume 2, No. 3

PREScott, ARIZONA — AUTUMN 1960

50c Per Copy

From P.O. Box 1912

"THE CLARION CALL"

Motto

WE ARE CALLED TO ADVANCE INTO THE GLORIES OF THE NEW
SPACE AGE—THROUGH THE DOOR OF UNIVERSAL PEACE!

Issue No. 3

AUTUMN, 1960

Color prints of the cover (framed) with explanation of meaning on the back, can be obtained through the Symbolart Co. P.O. Box 1912, Prescott, Ariz. Prepaid orders filled in two weeks: 5 x 7 inches — \$3.50, 8 x 10 inches — \$5.00.

"The Vortices of Space"

By
COLUMBA.

The formation of planets start as a comet-shaped mass of gasses, whirled around with the speedy revolutions of the center of the Solar System. As these revolutions slow down the elongation is shortened, until it becomes a whirlpool. This focusses diffused matter particles in the ether of space, into the vortex, which thus grows denser, with increasing concentration and heat.

As it cools, it hardens. The steamy atmosphere clears as it condenses into seas. The negative lines of magnetic force is the horizontal gravity, (balancing the inner pressures, as shown around the equator.) The positive lines stream vertically between the magnetic poles, where both meet. Any shifting of these causes the aurora borealis.

In eons of time, the planetary revolutions slow down, decreasing gravity and hence gradual loss of atmosphere and hence heat. Finally, it is a cold disintegrating mass, spreading out its particles as it dissolves back into the ether of space.

The colors show the various rates of vibration, from the fastest of violet down to the slowest of red, (we can see.) The Sun's rays hold the planets in their orbits, inside the huge Solar Vortex. The purpose of all this is the spiritual evolution of Man to his highest capacities, through an ever-closer contact with (and exercise of) the Cosmic Powers through virtuous living.

A. Culverwell, Editor and Publisher.

SUBTERRANEAN SURVIVAL

By Dr. R. Bernard

Experts claim that as a result of the late Russian atomic explosions in the Arctic, the concentration of Strontium 90 in the stratosphere has increased 50%, causing a marked increase of fall-out all over the U.S., poisoning the air, water supply, soil and foods. Since we do not have space ships to escape in, our last hope is to seek refuge deep in the earth by digging tunnels leading to subterranean cities, where we may continue to live. By a system of illumination we might even grow foods there that are free from Strontium 90. Also, it would be necessary to develop a method of air purification so that the outside air that enters would be first freed of its radioactive content.

It is interesting to refer to the theory of the South American archeologist, Harold Wilkins, in his book, "The Mysteries of Ancient South America." Speaking of the mysterious tunnels that run for thousands of miles under South America, he claims that they were built by Atlanteans prior to the deluge that sank Atlantis for the purpose of providing safety from the radioactive poisoning of the earth's atmosphere, caused by the terrible nuclear war (the "War of the Titans") that destroyed Atlantis by causing the earth to shift on its axis and bring on a flood.

Certain Atlanteans had foreknowledge of this catastrophe and constructed sub-oceanic and subterranean tunnels connecting Atlantis with Brazil, running from the coast of Matto Grosso and then on to Peru. It is claimed that the mysterious disappearance of the Incas was due to their entering such a tunnel when Pizarro and the Spanish conquerors came, then continuing their existence in the subterranean cities that were previously prepared. It is interesting to note that lately the Brazilian press and radio announced the discovery of such a subterranean city, which we believe was built by Atlantean colonists in Brazil.
(Reprinted from "Agharta," published by Health Research, Mokelumne Hill, Calif.)

* * * * *

EDITOR'S NOTE: An axis shift of the earth happens ever so often down the ages because of the mounting inequilibrium of the earth's small orbit. A book on the above subject is "A Journey to the Earth's Interior, Or Have the Poles Really Been Discovered?" by M. B. Gardner, published by Eugene Smith Co., Aurora, Ill.

I have a theory too. Maybe subterranean cities (on the underside of the earth's crust) have been built by superior scientists (from outer space?) to preserve the human species indigenous to earth then through the long Ice Age. How else could they have survived????

When our scientists have perfected a machine (or their own E.S.P.) that can re-create, or look back into events of the past, then we will know for sure. But until then, all we can do is to send expeditions to discover what's inside our planet, as well as Arctic and Antarctic explorations!!!!

POLARITIES
By Ye Editor

The cleaner water is when whirling down a sink, the faster it runs and the larger the hole. Centripetal force of the vortex attracts material from outside, while centrifugal force throws the inrushing water away from the center, until the two meet (counterbalancing each other) at the rim. Thus the heaviest gravity is there. Galaxies and solar systems are formed from the concentration of spacial dust and gases in solution, from Divine Will. Planets are hollow, doughnut shaped globes (everything looks round from a distance), the heavier particles inside congregating on the inner side of the crust, while the lighter gases stay in the center.

The sun is a giant "generator" (of positive polarity) that holds "condenser planets (of negative polarity) in their orbits within the huge magnetic solar vortex. They are at varying distances from their solar source, according to their size and density.

* * * * *

EDITOR'S NOTE: If the sun is a "ball of fire," would the lower level show up darker than the outer corona in photographs? This proves that the inside layer is cooler than the outer. Our own Van Allen Belt encircling the earth is hotter than the surface. This comes from certain solar rays being screened out by our atmosphere and these energies pile up on the periphery. There are other kinds of "fire" right here on earth. I have held my hand in a blue flame from a gas-jet that felt cool. The White Flame Phenomenon (explained in the first issue of "The Clarion Call") did not even singe anything it touched.

To digress into sublimable history, my theory is that the Godhead formed the Suns for Souls of godlike stature from higher evolutionary rounds, while Souls of lesser stature were drawn by the universal Law of Attraction to the planets in the order of their evolutionary progression. According to Genesis, the Gods said, "Let US Make Man In Our Own Image." (Notice the plural!) I believe this "Image" meant only in spiritual, intellectual and free-will aspects, because physical evolution must adhere to adaptation to environment in order to survive in the various conditions found on different planets.

The higher we evolve in this "Image," the more our Divine Creator's Powers can be tuned-in on and used. Humanity has reached the stage where we can create with materials already made. But there is a higher stage where the very materials themselves can be produced out of the ether of space, which possesses the essences of all things in the forms that our will-power shapes them in by organizing the atoms in these matrixes of thought.

Our Creator experiences everything through His creations (in the highest sense). Only God gives us free-will to choose our own lines, thus making our own character, which decides the kind of fate we will eventually draw out of the Cosmic Law, that decrees we reap whatever we sow, by the same polarities that run the Universe in the spiritual planes, of which the physical is only a reflecting condensation.

Excerpt from "THE ANALYST"

A group of advanced scientific specialists have located and analyzed the sixth and seventh sense centers and organs. A play of energetic forces were implied of energy manifestation not yet known to relative science. Concentrations of energy vibrations moving at variations of speed up to that of the square of the "speed" of light, the substance affected would no longer manifest within the limitations of known atomic combinations.

An identity willingly and knowingly using such force must necessarily know how to lengthen the orbits of the atoms of his so-called physical vehicle beyond that which is identified now as physical. Man at the core of his being, knowing its nature and that of his environment, is able to overcome all the apparent limitations of matter, time and space at will. It is only now that scientists are beginning to find out that matter and energy are one and the same thing, in different states of vibratory activity.

In 1957, one of our modern scientists, experimenting with the laws of relativity, made the discovery that space is a non-existing concept in that it is filled solidly with the substantial reality of negative energy forms. Matter is simply an aspect of energy in relative transitional states and conditions, which are integrated in a continuity of progressive interaction.

Cognition expresses in UNITS of ONE (DIVINE MIND--ED.) but the unit One may be divided into multiples by characteristics. Although division may seem to have been accomplished for comparative relative understanding, each subdivision is merely a relative degree of the same basic phenomenon, and that, in turn, a subdivision of a still HIGHER UNIT! Rays of light are broken into angles when passing through a prism, and we see seven colors. We take any gas and reduce it to a solid state by reducing its rate of vibrations. Ice, water and vapor are known to be only three planes of vibration of the same combination of elements. Transmutation of one condition into another is primarily a mental art, but all things may be transmuted on their relative planes, or to higher planes when we learn the Law. The ALL is MIND. All is in THE ALL, and THE ALL is in ALL.

* * * * *

EDITOR'S NOTE: As we are parts of ONE GREAT WHOLE, therefore, what hurts or helps one affects all in some way. Spirit forms can go through solid (?) walls, like water through a sieve, because of the higher, hence stronger, frequencies. Speed of frequencies raised above the level of physical vision can be compared to the blades of a fan becoming "invisible" when revolved fast enough-but they are still there! Matter divided into gases, fluids and solids give clues to relative action on the higher planes of the mental, emotional and etheric vibrations.

Physics will gradually confirm the truths that METaphysics has expressed for so long, these many years! Then the sneers will change to cheers! Why does Humanity take so long to give credit where credit is due for any good achievement?

THE CAMERON CONES
By Rev. V. L. Cameron

Interest has been stirred up by the articles printed years ago in "Round Robin" Magazine, about my discovery of strange forces, accumulated from the ether. Convex metallic forms give off an odd sort of force-field, with a negative and positive polarity, similar to the energy-zones around a magnet, or a radiant heat source. In the case of the 22-inch metallic cone, 90 degree angle (so it will fit into the corner of a square) with the base closed, it will throw the force-beam approximately half a mile to a flat circular end, as much as 300 feet in diameter.

In some tests I bounced the cone or coil ray off a mirror, catching it with another cone or coil, and from it to another, and back to the first in a sort of cyclotrone, or around three cones from apex to base, thereby constantly amplifying, since each continually added its own quota of force. (From "Round Robin," P.O. Box 548, Vista, Calif.)

* * * * *

EDITOR'S NOTE: Are the three balls under the bell-shaped spaceships really energy-accumulators? Is the top of the central pole through the U.F.O. of positive and the other end of negative magnetism, that can be turned for phasing directions? This is the kind of pyramid-shaped cone that will be on top of the circular "COSMIC ARTS SHRINE" (described in the first issue of "The Clarion Call) when it is built in the New Space Age.

THE TIME PARADOX
By G. Heard

If the earth was moving through the ether, as observations had shown it was, then the double journey of lightbeams, first from east to west, and then from west to east, should take slightly longer than one of equal length from north to south and south to north. Logically, the time lag between the two beams would reveal the earth's speed through the ether.

But the results were against all "common sense"! It proved conclusively that, despite what happens in the case of oarsmen (one rowing a certain distance upstream and downstream and the other rowing an equal distance across stream to arrive at different times, the difference in time between the two boats revealing the speed of the current) light beams have equal transit times.

To check for inaccuracies, the experiment was repeated, with the apparatus turned through 90 degrees so that the "downstream" leg became the "cross-stream" leg, and vice versa. Yet, still the lightbeams arrived at precisely the same instant! The over-riding truth of the matter is that the speed of light is constant, regardless of the earth's motion.

* * * * *

EDITOR'S NOTE: Another new discovery is that the sun is cooler than at first thought to be. If this were not so, why would the lower altitudes (which have a thicker atmosphere) be warmer than the mountaintops in the higher altitudes, which have a thinner atmosphere? Because the heat of solar rays is generated by friction with the air-molecules!

GODS IN THE MAKING

By A. K. Culverwell

The purpose of all evolution is for us to grow up into the consciousness that we are really greater (in spiritual essences) than we have ever realized before - in our potentialities for infinite development. "Aim at the stars" - but study your next step on the way up to them and prepare for tougher tests the farther up you go. Those whose sights are lifted higher and whose vision extends farther will travel faster to reach greater heights. The higher we rise, the humbler we should get, as we see ever more clearly into Divine Nature. If we are really the children of God, that makes us little "gods" and "goddesses" growing up into the stature of spiritual nobility that was meant for us from the beginning of our creation.

This realization will give ever deeper meaning to this life, by opening up vast new vistas of opportunities to exercise our inherent powers that our virtues must nourish, by using such powers only for good purposes. If we keep faith (through all trials) in our highest qualities to overcome the lower, to blossom into wondrous fruit, we will deserve promotions up the ladder of spiritual and intellectual evolution.

"Know ye not that ye are gods?" (meaning our higher Divine side). "No man is good." (Meaning our lower human side.) "My Father" (the Spark of our Divine Nature) "and I" (human nature) "Are One!" (when the Divine expresses through the human,) Life gives us a chance to fan that Spark into a White Flame, that lights and warms the world about us - to inspire others to fan their Divine Spark more.

As to human nature, it can be divided into three categories (more or less mixed in most people), and those are: The SUB-HUMAN, the IN-HUMAN, the HUMAN up to the SUPER-HUMAN! This is the whole story of our spiritual evolution. Now that most of us have reached the human stage (although still with too many vestiges of the inhuman left in us) our next step upward is to the SUPER-HUMAN! Whatever hurts you or others (in any way) is what we call "evil" (the opposite from "live"). Whatever helps you or others (in any way) to grow spiritually, is what we call "good" (God). This definition of good and evil can be a mixture, demanding analytical logic to sift the wheat from the chaff.

Whatever we deserve will eventually come to us. As we pass all tests with flying colors by developing our highest capacities, we will attract responsibilities in ever higher opportunities, beginning with authority over our own minds and hearts, rightly exercised. When we become in reality "God in human expression," we will have more to look forward to than we can now imagine! Only thus can we fulfill our Infinite Creator's divine purpose in creating us!

When we graduate from the highest grade in this earthly "School" we will be promoted to the lowest grade in the next higher Planetary School (closer to our Solar Source) to climb up through the grades there - until we graduate into the Sun, to work with the Solar Logoi. Then we will learn how to become Planetary Guardians, and from there to become a Solar Logos of a New Sun, created in far-flung reaches of interstellar space, and so on up and up to infinite possibilities.

NEW AGE SCIENCE

(From Philadelphia "Evening Telegraph")

As far back as April 13, 1890, Keely, an inventor, demonstrated the model of an airship which weighed about 9 pounds. When the differentiated wired wire of silver and platinum was attached to it, communicating with the sympathetic transmitter, the model plane gently rose, descended or remained stationary midway. A glass chamber 40 inches in height, filled with water, on a glass slab where three metal spheres (6 ounces each) rested, were used. The chord of mass of these spheres was B flat (first octave, E flat (second octave) and B flat (third octave). Upon sounding the note B flat on the sympathetic transmitter, the sphere having that chord of mass rose slowly to the top of the chamber; the positive end of the wire having been attached, which connected the covered jar with the transmitter. The same result followed the sound of the note of sympathy with the chord of mass of the other spheres, all of which descended as gently as they rose upon changing the positive to the negative.

* * * * *

EDITOR'S NOTE: This may explain the reason for the three balls underneath the bell-shaped flying saucers. Glasses filled with various quantities of water give off various tones when struck. If the same note is sounded long and hard enough (on a violin, etc.) the glass shatters.

From "PROCEEDINGS" Magazine

By G. Van Tassel

Research into the forces of negative polarity light, contra-polarity magnetism and zero polarity balance have revealed many things. None of these natural forces require fuel to manifest their respective powers. Only brute forces require the consuming of some substance to manifest power in material objects or machines.

Application of magnetism in polarity opposition will produce more power, per gauss, than gasoline has ever produced in horsepower per gallon. Dia-magnetic application of static electricity, in a field, will build a wall stronger than the strongest building materials. Control of the differential between the positive and negative magnetic poles makes it possible to phase the natural forces and use them.

T-V INTERVIEW ON F.S.

By Riley Crabb

Allingham (author of "A Flying Saucer From Mars") quotes the French astronomer, Charles Messier, June 17, 1877. In his diary: "They were large and swift, and they were like ships, yet like bells."

* * * *

EDITOR'S NOTE: I see by the papers that the U.S. Armed Forces have built circular platforms that fly by means of strong air-jets around the sides and on the bottom, that propel it in any direction. But, the motive power is still the usual fuels.

GENUINE SPIRITUALITY

By Ye Editor

We know that life-forms evolve according to how well they can adjust to their environments. The spiritual planes interpenetrate the material, although our present make-up of eyes cannot see them any more than we can see the brilliant colors in dull stones until under ultra-violet lighting. Nor can we see the ray that automatically opens doors, etc. Matter is simply a grosser condensation of spirit, in which the vibratory rate is lowered through the atoms revolving more slowly. There are still many more invisible mysteries that science may eventually discover and harness for useful service.

Man's ideas about "God" have evolved according to the growth of his own limited comprehension of the spiritual realms. The Supreme Power of the Universe is much more marvelous than man can yet conceive of! Man is also under the dominion of the immutable laws of Super-Nature. When his spiritual and intellectual powers develop, he discovers how to adjust to and benefit from them.

Spiritual maturity is attained when we stand on our own feet by stressing ethics in practice, emulating those more highly advanced souls who more clearly reflect the attributes of Divinity. We can only make more direct contact with the Higher Powers when we have developed the capacity to "tune in" on such frequencies. Analytical logic is man's most precious possession, as the blossoming of latent talents spring therefrom. Evolution is a dynamic unfoldment, not a static crystallization.

What Humanity needs most to save it from a lot more trouble and accelerate its progress to the ultimate high goal (Divinely ordained) is more of the **LIGHT OF REASON**, and less **HEAT OF PASSION**! Our higher faculties can be compared to the "engineer" guiding the "locomotive" of our lives, and the emotions to the "steam" in the boiler. The struggle of life is for the engineer to gain full control over his engine. The endurance of true freedom is based on our capacity to know how to use it rightly. The deeper the "staves" (of right will-power and dependability), the wider the "canvas" (of opportunities and responsibilities) can be made, without the risk of the "tent" being blown away.

Just as radio waves are bounced back to earth from the higher atmospheric layers, so our desires and fears are relayed and returned (in time) to be realized in some form. Success in anything depends upon visualizing our objective and then working towards it with unshakeable confidence. **IF WE DO OUR BEST, GOD WILL DO THE REST** - although maybe not in just the way we expect!

HEALTH HINT

Just think of all that has to go through the neck to feed the brain. When constant tension stiffens the muscles of the neck, these channels get "clabbered." So take a deep breath and hold it while you roll your head around slowly, first one way and then another, to increase clearer thinking.

DIANETICS
By L. Ron Hubbard

There are Medical, Dynamic, Political, Military, Industrial Dianetics, etc., and not the least, Preventative Dianetics. On that may hang the final answer to society. Dianetics is summarized in its current workable form. It is an organized science of thought, built on definite axioms; it apparently reveals the existence of natural laws by which behavior can uniformly be caused or predicted in the unit organism or society. It offers a therapeutic technique with which we can treat any and all inorganic mental and organic psychosomatic ills, with assurance of complete cure in unselected cases. It produces a mental stability in the "cleared" individual, which is far superior to the current form. In Dianetics we have a method of time dislocation dissimilar to narco-synthesis or hypnosis, with which the individual is able to reach events hitherto hidden from him, thus erasing the physical and mental pain from his life,

Dianetics gives us an insight into the potential capabilities of the mind. It reveals the basic nature of man and his purposes, and intents, with the discovery that these are basically constructive and not evil. It gives us an appreciation of the magnitude of events necessary to aberrate an individual. With Dianetics we discover the nature of prenatal experience and its precise effect upon the post-natal individual. It shows that all memories of all kinds are recorded fully and retained. It demonstrates that aberrative memories lie only in areas of "unconsciousness" and, conversely, that only "unconscious memories" are capable of aberrating. Dianetics opens broad avenues for research. One new field is the subscience of perceptics - the structure and function of perceiving and identifying stimuli. It sets forth the non-germ theory of disease, embracing the cure of some 70% of man's pathology. Dianetics gives a more fundamental explanation of the uses, principles, etc., of hypnosis and similar mental phenomena.

To sum up, it indicates a new method of approach to the solutions of the problems which confront governments, social agencies, industries and, in short, man's sphere of endeavor. It suggests new fields of research. Finally, it offers a glimmer of hope that Man may continue his progress of evolution towards a higher organism without straying toward the danger point of his own destruction.

* * * * *

EDITOR'S NOTE: A most enlightening analysis of how the mind works, and can be untwisted in both of its aspects, conscious and subconscious. Hope I have made you curious enough to send for the booklet, "Dianetics: The Evolution of a Science," published by the Hubbard Research Foundation, 1812 - 19th St., N.W., Washington 9, D.C.

It is always wise to get to know ourselves more thoroughly to bring out our very best!

All the great sages, down through the ages, in many pages, free us from cages of temper rages, and evil's wages, on all Life's stages, Mankind engages!!

THE GARDEN OF ALLAH

We are about to enter into a discourse on what is known as the Garden of Allah. Allah, of course, means God, Universal Intelligence, call It what you will - but a Supreme Power that governs everything! It is a well-known fact that nothing stands still. The world and you and your work and every business either retrogresses or progresses - it is the Will and Aim of the Great Hierarchy to advance and you must subject yourself to that Will. The thing for us to do right now (for we are the "advance guard") is to move upward and forward spiritually, mentally, physically, financially and socially as rapidly as possible. When I say "move physically," I mean from ill-health to good health - from mental confusion to mental peace.

The five known TATTVAS are the psychic equivalent to the five physical senses. The TATTVAS also represent the five departments of life which are the social, the physical, the mental, the financial and the spiritual. As we go on the path from the clod to a god, it will become easier and easier to tread - depending entirely upon the sincerity, regularity and zealousness with which these instructions are followed. Throughout the lifetime of man on this earth, his actions and thoughts fall into five separate and distinct divisions or departments. His success in living depends entirely upon how well he has expanded and used these five departments of his physical life, and how well he has meditated upon the five Tattvic centers so closely connected to each of them. A star - five-pointed - ably represents the five departments of your life. The uppermost point represents the Spiritual, the upper right the Mental, the upper left the Physical, the lower right the Social, and the lower left the Financial.

These five divisions cover completely every phase of human life regardless of what different names they may bear. They remain unalterable, constant and fixed. Likewise, in the spiritual prototype, the five Tattvas can be fitted into places that will synchronize with the five departments of the physical life. Life holds but one purpose: a purpose which is inexorably decreed by destiny; that each human being starting from the center of his individual star, must fill out all the departments of life represented by the points, evenly and symmetrically, taking care that one point be not greatly developed beyond the others, but rather that they all be expanded alike.

All of the five points of the star and all of the five Tattvic centers work together, when rightly assembled, like the parts of a good running automobile. There is no such thing as true happiness with an "over-development" of one or more points of the star - nor is there true "Peace that passeth understanding" when there is an under-development of one or more of the Tattvic centers.

* * * * *

EDITOR'S NOTE: I ran across this among my papers, but do not know who wrote it. If anyone can find out, I will be glad to give suitable recognition, and apology for using it without permission, after finding it was so well worth publishing.

WHEN EARTH BECOMES A SUN
By C. Krebs

One astronomical theory is that at one time, way back before the galaxies were formed, all such matter was concentrated in one immeasurably gigantic sun that burst its bounds. From this tremendous explosion of creation, the galaxies were whirled into new reaches of space in an expanding universe.

When enough souls have graduated to the central "Heaven is within" the earth (the larger sense of "Heaven is within" one's solar plexus), the pressure of their accumulated powers in mutual spiritual Love and Love for all Humanity will burst the hard shell of the earth's crust, which holds the lowest spirits prisoners. Then, the glorious Light within the center will shine out, after the fire, engendered by the solar radiations, has consumed the surface by friction with the atmosphere.

The force of this terrific explosion will send the earth skyrocketing out of its present orbit into a new part of space, yet near our galaxy. The crust will "melt with fervent heat," as the Bible prophesies. These parts will be moulded by centrifugal force into doughnut-shaped spheres, like a potter forms soft clay, and thus become new planets orbiting their new "earthian" Sun at various distances, by the attractions of its magnetic vortex, time cooling them down to form their own crusts.

Thus they will eventually become inhabited with physical creatures from seeds that survived and/or migrations from other more mature planets. These creatures will be ensouled by those spirits who had not "made the grade" by "flunking" their spiritual "examinations" while in the earthly "school." Therefore, these spirits will incarnate on the new planets for the further purging and training that is needful to give them another chance to rise into higher dimensions - and so on and on, ad infinitum, throughout the Omniverse! The words "planet" and "plane" are similar because each planet is on a different plane, with subdivisions therein.

As each round of evolution of this type has ever smaller and smaller numbers of souls who haven't "made the grade" before, as more and more souls do graduate, so ever smaller solar systems are needed to accommodate their physical incarnations. The blessed compassionate system of evolution obtains from the infinitesimal up to the Infinite! This theory (carried to its logical conclusion) infers that even every ATOM will eventually become a Galactic God - somewhere, sometime!!! Life is the same in all its manifestations. Now we are at least the "god" of all the atoms in our bodies, each atom being like a solar system, with electrons whirling around the proton-nucleus. They evolve according to the mutual interchange of influences between us and them.

If we develop the specialized brain-cells that respond to Divine Thoughts, through widening and strengthening our "doorway looking into Heaven" (the top of our heads), we will come to understand all the mysterious and wondrous GLORIES of our Beloved Creator's manifold Creations.

POETRY PAGE

MY PRAYER

By L. T. McAllister

Lord, I am thankful for the trials
 That caused my soul to grow,
 And taught my oft rebellious heart
 The better Thee to know.

I am thankful for the obstacles
 That slowed my wayward feet
 And let me see the dangers
 I otherwise would meet.

I am thankful for the loyal friends
 Who kept hold of my hand,
 As well as for those others
 Who did not understand.

I am thankful for the sorrows
 That then seemed so unfair,
 And yet, which gave me sympathy
 For others in despair.

For Lord, through all these trials
 I have truly come to know
 This life is just a school
 Where we suffer but to grow.

So let me, then, through all my days,
 Remember oft to pray!
 Thy Will, not mine be done, dear Lord,
 Thou art the Living way.

MAGIC THOUGHTS

By D. L. Schindler

Thoughts are things
 That have swift wings,
 And fly through the ether blue.
 They dash and dart
 Right to the heart,
 And ever come back to you.
 That's why it's smart
 To do your part
 In thinking what you should;
 Always weighing, always saying
 Things that will do some good.

EVOLOSOPHY RESEARCH BULLETIN (2)
(New Age Electro-Magnetics)
By F. J. Ryan

To incorporate the curve means to get off the plane surface. The flow of force on these tracks completely governs all motion of the physical body, i.e., articulation and travel of all the joints. This applies to the physical form, but mentally it also helps one to become uplifted (leave the plane surface) and perhaps is truly the form of force that can actually levitate the body. These lines do not follow any anatomical structure of the body, i.e., arteries, veins, or trunk-line nerves.

Anyone attempting to restore "internal communications" would save a lot of time by visualizing and feeling this flow of force along the lines, as illustrated in these graphs - any technique (regardless of the school of thought) will be improved. At the end of this series we shall tell of a few more related areas that can help a lot of people with their various techniques of meditation; for, so far, this has worked for anyone who has tried it, and we feel sure any sincere effort towards its use will be rewarded.

* * * * *

EDITORIAL COMMENT: Nobody, but nobody (not even a "god") can carry us to Heaven like babies. We must learn how to creep, then walk, run and fly all by ourselves, with Divine Help from Heaven (that is within). These envelopes of gradations in textural refinement, intensity and speed of frequencies in our force-fields (auras) all have an affinity for various tissues and essences of our bodies.

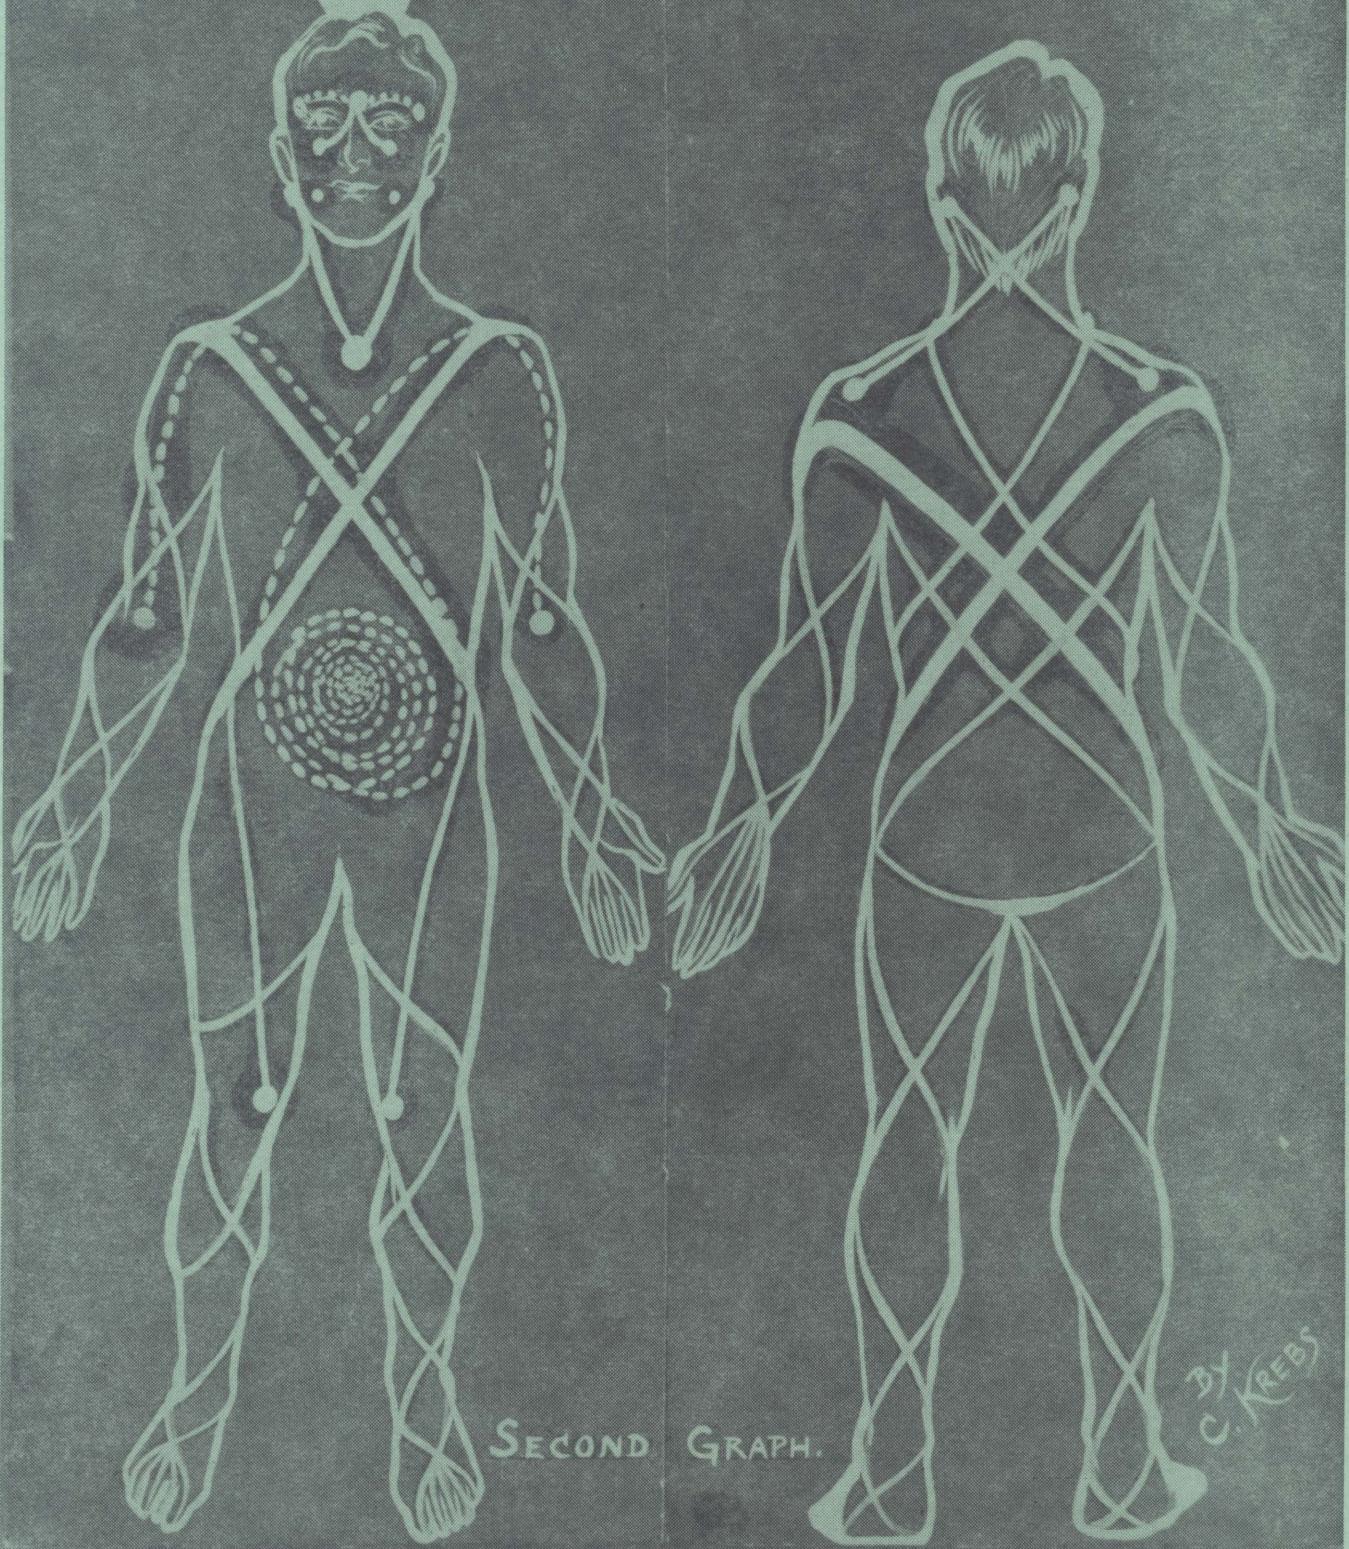

Following is a quotation from "Son of Perfection," Part II, by Prof. H. Hotema: "Science says that man has five sense powers, but the ancient Masters taught and proved that he has seven. This is another secret of the Vital Battery concealed in Revelations, the Book of Sevens." (Address: (Health Research, Mokelumne Hill, Calif. \$1.)

MONEY AND TAXES
(Anonymous)

Money really represents its only true basis - that of goods and services. Any other kind of basis is artificial and an obstruction to its normal flow, if used like an accordian, to expand or contract the amount of money issued, and its buying power. Too much expansion in amount issued causes inflation, if in excess of its basis, lowering its purchasing value. Too much contradiction in amount issued causes deflation if below amount of goods produced, thus decreasing money's service in moving goods.

The only way to keep income up to living expenses is to have only as much money issued as will move goods and services that are produced. If the government issued money to pay its own running expenses (and incidentally its give-aways to help other countries) on this real basis of balancing the amount and value of money with goods and services, all the debts wouldn't be necessary that are now slowly strangling our prosperity. IT IS AS SIMPLE AS THAT!!!!

NEW-AGE ELECTRO-MAGNETICS
